

## TriboCon

### Digital Water & BN Test

- Water-in-Oil Test  
for lubricants and fuels  
Range: 0 – 1%, 0 – 2%
- Determination of Base Number  
of engine oils  
Range: 0 – 150 mgKOH/g (BN)
- Robust coated metal housing
- Exchangeable battery (9V block)

**Order No.: 1009**

Consumables:  
#1058/1060, #1059, #1027  
(Must be ordered separately)

The scope of the TriboCon series is to measure the water content of lubricants and fuels and is also designed to determine the Base Number (BN) in engine oils.

The TriboCon provides two water measuring ranges: 0 – 1% and 0 – 2%. The BN measurement becomes

easy as the calibration mode of the TriboCon includes the ability to enter the name and the calibration value of the oil in use. At any time the right BN settings can be easily recalled.

Made of high-quality parts and enclosed in a robust coated metal housing, it is the tool for field engineers controlling the condition of the operational fluids on site.
