

BN Reagent

Base Number

- Reagent to determine Base Number of engine oils

The Tribo**Con** is a digital device to determine beside water content the Base Number in engine oils.

The base number is a crucial parameter to identify the additive reserve in engine oils and learn about the capability of the oil to cope with acids generated during the combustion process.

ReaMar BN Reagent is the reagent used in the Tribo**Con** to determine the base number.

By checking the base number regularly the operator gets the valuable information about the quality and performance of the engine oil in operation.
